**GROWTH
MARKETS**

“Growth markets are **transforming**.

Some currently raise more funds than main market rivals and some are progressing to becoming international exchanges.”

Philip Secrett, International Director, Capital Markets, Grant Thornton UK.

Methodology

The 2007 **Global growth markets guide** analyses the merits of the 41 stock markets competing to list growth company stocks. We also list the 48 largest main markets and analyse their performance throughout 2006. All growth markets are listed in the directory at the back of this guide. For certain markets, detailed comparative market performance and admission criteria have also been included.

Introduction

“AIM has emerged as the star performer, increasing the average number of companies listed by 300 in 2006 – more than all the other world growth markets combined, while also accounting for around half of the total funds raised across the most active growth markets. It has also consolidated its position as a market for international listings due to its low-regulatory burden.

As the growth markets succeed in attracting more early stage and high-growth companies, there has been an overall upward trend in market liquidity with KOSDAQ, the Mothers Market and NASDAQ enjoying increases, the latter’s success being attributable to the gradual filtering of companies listed.

2006 saw the beginnings of a flurry of cross-border consolidation of exchanges, with the NYSE and Deutsche Börse expressing their interest in acquiring Euronext, with the former succeeding and the latter instead making bids for the London Stock Exchange (LSE) and the International Securities Exchange (ISE), both of which it eventually dismissed. While NASDAQ tentatively agreed to acquire the Nordic market operator OMX Group (OMX), their bid to take over the LSE failed, leading to the LSE announcing plans to acquire the Borsa Italiana.

These alliances provide the exchanges’ clients with global coverage and the ability to benefit from trading in different time zones. However, the real benefits of globalisation will only become apparent when companies and investors feel as comfortable using a foreign exchange as a domestic exchange – and this will only happen when there is greater convergence of regulatory standards.

The global growth markets guide analyses the performance of the 41 stock markets competing to list growth company stocks, giving an overview of their size, activity and admission requirements.”

Philip Secrett
International Director
Capital Markets
Grant Thornton UK

Markets in context

At the end of 2006, there were 41 growth markets around the world – 19 in Europe, 15 in Asia Pacific, three in Africa and four in the Americas.

Growth markets are aimed at younger and smaller companies with high growth potential.

This contrasts with the main markets which typically target larger, more established companies. Smaller, fledgling companies can suffer on main markets through comparisons with better resourced and larger companies, resulting in a low or poor profile.

Growth markets analysed in detail are those which have been in existence for at least four years, have more than 150 companies listed, and a market capitalisation in excess of US\$2 billion. We also provide insight into some of the countries and regions attracting significant international investment.

Where to list

Some growth markets like to claim that they are sector rather than geographically based and that they attract similar companies from across the world. In reality, growth markets predominantly list domestic stocks only. For most small companies, opportunities to raise money on an international stock exchange are

limited. Companies are often drawn to international exchanges due to their perceived brand value rather than for purely commercial reasons. There is also a widespread and sometimes mistaken belief that higher valuations can be obtained by going to an international stock market. Accurate comparisons can only be made between similar-sized companies and after making adjustments for different accounting policies.

Growth market characteristics

Regulated market

A qualifying growth market must be regulated by either a stock exchange or respected governing body. OTC (over the counter) markets have been excluded.

Companies listed

Companies within a qualifying market tend to be of small or medium market capitalisation and active in rapid growth sectors.

Reduced admission criteria

When compared with its principal market, a qualifying growth market often has less stringent admission criteria.

Market insights

Brazil

Brazil enjoyed another outstanding year as the Bovespa (Bolsa de Valores de São Paulo) index, representing the country's main stock exchange, increased by 33% in 2006. Foreign Direct Investment (FDI) grew by 25% over the same period reaching US\$19 billion. Brazil is second only to Mexico in the Latin American region as a destination for FDI. Examples of Brazilian companies making acquisitions abroad, include Companhia Vale do Rio Doce (CVRD), Petrobras, Gerdau and Itaú.

Standard & Poor's credit rating revision (Brazil is now only one notch below investment grade) contributed to the Bovespa's 17% growth in the first five months of 2007. This has acted as a catalyst for the Brazilian Real to complete a long recovery, exceeding US\$0.50 for the first time since 2000.

Brazil's economic output rose to US\$1.6 trillion last year, making it the ninth largest economy in the world. The outlook remains strong, as demand increases for Brazilian commodities and raw materials such as sugar cane and corn used in the production of ethanol and bio-fuels. This combines with the strong performance of the Real, inflation rates below 5% and lower interest rates to continue to support the country's growth. In addition, the Brazilian government is promoting market reforms and has invested US\$230 billion in plans to boost economic growth. It has created a four year strategic plan designed to improve the performance of the energy, transport and urban infrastructure.

“Brazil's economic output rose to US\$1.6 trillion last year, making it the ninth largest economy in the world. The outlook remains strong, as demand increases for Brazilian commodities and raw materials such as sugar cane and corn used in the production of ethanol and bio-fuels.”

China

Riding the tide of the strong global economy, China experienced another year of robust economic growth, with real GDP growth at 10% in 2006. Capital market activities in Hong Kong during 2006 reflected the continued growth and development of the Chinese economy.

The economic growth in China has resulted in an increasing number of Chinese enterprises looking at the capital markets as a way to raise funds for expansion. In Hong Kong, more than US\$43 billion was raised through initial public offerings (IPO) in 2006, while another US\$24 billion was raised through offerings on the secondary market. Six of the top ten IPOs in Hong Kong were Chinese state-owned companies while the others were privately-held China-based enterprises. In 2006, the Hong Kong stock exchange (HKSE) hosted the US\$16 billion IPO of the Industrial and Commercial Bank of China, the world's largest IPO to date. These activities have pushed the Hang Seng Index and overall market capitalisation in Hong Kong to record levels. The Hang Seng Index increased by more than 30% in 2006. At the end of 2006, the HKSE had a market capitalisation of US\$1,700 billion, an increase of more than 60% compared with 2005 and 62 new companies were listed in 2006.

The strong performance of the Chinese economy has benefited both capital markets in Hong Kong and Mainland China. The stock exchanges in Mainland China (Shanghai and Shenzhen) experienced phenomenal growth in 2006 and had combined market capitalisation of US\$1,150 billion. More than US\$30 billion equity funds were raised through IPOs and secondary market offerings on these two stock markets. Recent market reforms on these two stock exchanges implemented by the Chinese authorities and the economic development of China have contributed to the overall growth.

The outlook remains strong with the Chinese economy forecast to maintain its impressive growth rate in 2007. The Olympic Games are scheduled to take place in Beijing in 2008, and are likely to steer the Chinese economy further. In addition, fund raising activities in both Hong Kong and Mainland China are expected to grow to meet the ever-increasing demand for new funds to fuel the growing Chinese economy.

“In 2006, the Hong Kong stock exchange (HKSE) hosted the US\$16 billion IPO of the Industrial and Commercial Bank of China, the world’s largest IPO to date. These activities have pushed the Hang Seng Index and overall market capitalisation in Hong Kong to record levels.”

India

Strong economic conditions, rising foreign exchange reserves and improved regulation in stock markets all led to another buoyant year for capital markets in India. The economy is forecast to grow by 9.2 % with GDP displaying 8% growth over the past three years. For the first time in 15 years, the ratings agencies, Standard & Poors and Moody's and Fitch, revised India's credit rating, raising it to investment grade. All these factors will raise investor confidence and encourage stronger markets in the future.

In 2006 the Bombay Stock Exchange (BSE) had a market capitalisation of US\$812 billion (compared with US\$545 billion in 2005) and 7500 companies listed. In addition, the National Stock Exchange (NSE) had a market capitalisation of US\$761 billion against US\$516 billion in 2005.

During 2006, Indian companies raised US\$19 billion from global markets far exceeding the inflow of foreign direct investment for 2006, which was just US\$9 billion in the same year. The net investment of foreign institutional investors (FIIs) in the Indian secondary market during 2006 was US\$11 billion, with the number of FIIs reaching 1,057.

Private equity investments reached US\$7.9 billion across 302 deals in 2006, with the average investment size reaching US\$26m in 2006.

91 initial public offerings (IPOs) were valued at US\$5.63 billion in the primary market segment in 2006. M&A deals increased significantly, with 480 deals worth US\$20.3 billion compared with \$18.3 billion in 2005. In addition, cross border deals also increased with 226 deals worth US\$15.3 billion in 2006 in comparison with 192 deals worth US\$9.5 billion in 2005.

“During 2006, Indian companies raised US\$19 billion from global markets far exceeding the inflow of foreign direct investment for 2006, which was just US\$9 billion in the same year.”

Russia

During 2006 the market capitalisation of the Russian stock market was US\$1.1 trillion in comparison with US\$275 billion in 2004. This exponential growth has been caused by the rising number of IPOs and large scale placements of state owned companies, such as Rosneft, Sberbank and Vneshtorgbank. However, the recent rapid growth is expected to stabilise.

The strong performance of the market has been spurred by several factors, including the rapid growth of the economy, as well as political stability and Russia's growing investment ratings. In addition, many Russian companies are applying effective laws on transparency and corporate governance and this has resulted in the growing confidence of investors in the market. The main traded sector is natural resources, as investors' interest towards Russian companies is at an all time high due to increased world demand.

The outlook remains strong, as regulatory bodies are promoting greater transparency in the market by bringing legislation in line with international standards. In order to remain competitive, the Russian stock market accounting infrastructure has been reformed. These changes include the intention to create a central depository and introduction of modern risk control instruments for financial market players. Also, a strategic two year plan involving financial market development has been adopted.

“Many Russian companies are applying effective laws on transparency and corporate governance and this has resulted in the growing confidence of investors in the market.”

Sergey Aslibekian, Partner, Grant Thornton Russia.

Market performance

Figure 1: Market indices

NASDAQ dwarfs all the other growth markets combined and, as the oldest established market, it has a substantially different type and size of company listed. However, it is widely regarded as the benchmark for growth companies around the world and is therefore included for the purposes of comparison.

2006 was a year of mixed performance for the growth markets, with all market indices experiencing a pronounced drop in May 2006, and AIM and KOSDAQ finishing the year down, by 12% and 7% respectively. All the other markets recovered by the end of 2006, with SESDAQ and the TSX-V appreciating substantially, by 52% and 17% respectively, and with GEM and NASDAQ appreciating by a more modest 6% and 5% respectively.

Since January 2004 all market indices other than GEM have appreciated. The star performer has been the TSX-V, recording a 67% index appreciation, followed by KOSDAQ at 37%. The SESDAQ, AIM and NASDAQ indices appreciated by 22%, 19% and 17%, respectively.

There is a broad range of markets falling under the definition of a growth market, each with different types of listing. To facilitate a comparison between the more established markets, this section of the guide looks only at markets which meet the following criteria:

- market must have been in existence for four years
- at least 150 companies must be listed at 31 December 2006
- market must have a minimum market capitalisation of US\$2 billion.

Market indices are used to track movements in the overall share prices of the market. The indices are a representation of how well a market and the companies listed on it have performed as a whole.

Number of companies listed

AIM has become the market of choice for growth companies, attracting more listings in 2006 than all the other world growth markets combined. KOSDAQ, the Mothers Market and PLUS grew by an average of 44, 33 and 30 companies respectively. NASDAQ and GEM dropped by an average of 42 and 3 companies respectively.

Figure 2a: Number of companies listed (average in year)*

Figure 2b: Number of companies listed (average in year)*

* This is the sum of the total number of companies listed at the end of each month in a given year, divided by 12.

Total market capitalisation

Many markets have shown large increases in market capitalisation, reflecting both the values of new listings and appreciating share prices. AIM and the TSX-V recorded increases of around 80% and KOSDAQ increased by 48%. Only the Mothers Market recorded a slight contraction in the average total market capitalisation.

Figure 3a: Average total market capitalisation (US\$bn) *

Figure 3b: Average total market capitalisation (US\$bn) *

* This is the sum of the total market capitalisation at the end of each month in a given year, divided by 12.

Average market capitalisation per company

The average market capitalisation per company measures the size of company choosing to list on a market. Not surprisingly, NASDAQ is in a league of its own, with an average market capitalisation of nearly US\$1.2 billion per company. Of the other markets, the Mothers Market caters for relatively large companies, with an average market capitalisation of around US\$230m, with the rest of the markets ranging from an average of US\$20m (PLUS) to US\$91m (AIM).

Figure 4a: Average market capitalisation per company (US\$m)*

Figure 4b: Average market capitalisation per company (US\$m)*

* This is the average total market capitalisation divided by the average number of companies listed.

Monthly liquidity

Liquidity is a measure of the ease with which shares may be bought and sold, and shows the percentage of a company’s total market value which is churned in the market over a given period.

KOSDAQ and the Mothers Market enjoy sustained market liquidity of 52% and 41% respectively, reflecting the active retail investor base. The gradual filtering of companies listed on NASDAQ over the last few years has resulted in improved liquidity for the remaining companies, now up to 27%. As the growth markets establish themselves and succeed in attracting more companies, there has been an overall upward trend in market liquidity.

Funds raised

The most successful market for fund-raising during 2006 was AIM, accounting for around half of the total across all markets. NASDAQ and the TSX-V accounted for 29% and 12% of the total respectively.

Figure 5: Monthly liquidity: turnover of shares as a % of total market capitalisation*

* This is the sum of the total market capitalisation at the end of each month in a given year divided by the dollar value of all share trades in that month, divided by 12.

Figure 6a: Funds raised (US\$m)*

Figure 6b: Funds raised (US\$m)*

* Figures show primary and secondary raises

Monthly average turnover

The monthly average turnover of a market is an absolute measure of the availability of funds for investment in any given market.

The TSX-V, SESDAQ and GEM have experienced substantial increases in the value of share trades, with turnover increasing by 126%, 104% and 96% respectively.

Volatility

Volatility is a measure of the maturity of a market and its relative risk. Markets with high volatility may be prone to speculative investment. KOSDAQ has substantially reduced volatility from 6% to 2% during 2006, despite having a very active retail investor base and high market turnover.

Figure 7a: Monthly average turnover (US\$m)*

Figure 7b: Monthly average turnover (US\$bn)*

* This is the annual value of share trades, divided by 12.

Figure 8: Volatility (%)*

* This is the annual average of the month-to-month percentage variation in the index value. Figures are based on a monthly average.

The company experience

DHX Media is Canada's leading international producer and distributor of television programming and interactive content with an emphasis on children, family and youth markets.

Grant Thornton member firms in Canada and the UK recently helped the Halifax Film Company and Decode Entertainment to merge as one entity – DHX Media and list the resulting company on both AIM and the Toronto Stock Exchange (TSX). It was, as David Regan, Executive Vice President of DHX Media says, a very complex listing.

He goes on to say, “I was particularly pleased with the efficiency of the deal, given its global nature.”

“Dual listings on the TSX and AIM are attractive for a whole variety of reasons: there is greater credibility and access to a much wider pool of investors and more capital when compared with listing in Canada alone,” said John Carruthers, the Grant Thornton Canada partner who led the team on the transaction. He added, “AIM is a self-regulated market, the filing requirements are less onerous, and that makes an AIM listing even more compelling.”

These benefits closely matched the needs of DHX media, who wanted to access leading capital markets like London and Toronto to provide funding for the future development of their operations.

“When we decided to list on AIM and TSX, we chose Grant Thornton to be our reporting accountants. We were impressed with their industry expertise and experience of our sector as well as their well-known experience in taking companies to AIM.”

David Regan, Executive Vice President, DHX Media. DHX Media, worked closely with the Canadian and UK member firms.

TSX group

owns and operates Canada's two national stock exchanges, TSX and TSX Venture Exchange. The TSX is the largest stock exchange in Canada with 3842 companies and a market capitalisation of US\$1.7bn at 31 December 2006.

The company experience

Founded in 2005, by a chef and a former brewer from Carlsberg, GourmetBryggeriet is a leading Danish brewery that provides specialty beer in the Scandinavian region. Its quality beer is supplied to large retail chains, such as Dansk Supermarked and Coop Norden. Lars Dietrichsen, founder and Managing Director of GourmetBryggeriet explains:

“We chose to list on First North because it presented us with an opportunity to expand our existing shareholder base with private investors, who could become the company’s ambassadors in terms of marketing our products to their network. He adds, “We could have raised the capital through private placements but the public attention and PR value in listing at First North were important factors to us.”

“Our business plan focuses on growth and as part of our expansion plans we needed to invest in new production facilities and marketing activities. So, to fund this investment we went to First North to raise the required capital.”
